Function:

The RCI-RPT-RF2 is a store-and-forward radio signal repeater that can be used to extend the distance between a host and its remote(s). The unit receives data from the host and re-transmits it to the remote(s) and vice-versa. Using a repeater can provide access to remote locations that are not in direct line-of-sight with the host.

Standard RCI-XXX-RF2 units are also capable of acting as a repeater thereby serving a dual function of remote unit and signal repeater (see diagram on back).

The license-free spread-spectrum radio technology allows small systems to be set up with very little effort and at low cost. The technology ensures high communication reliability even in RF-intensive environments.

All units are sold with a ¼ wave omnidirectional whip antenna. Other antennas, such as directional Yagi or Patch antennas, are sold separately.
