Function:

The RCI-200-RF9 is a bi-directional data communication system that exchanges the status of 2 dry contact inputs and 2 analog inputs between a master and one or more remote units. A basic system consists of one master station and one remote station each with 2 dry contact and 2 analog inputs and 2 'C' relay contact and analog outputs. All signals are bi-directional so that data may be read from the remote station and sent to it.

The license-free spread-spectrum radio technology allows small systems to be set up with very little effort and at low cost. The technology ensures high communication reliability even in RF-intensive environments.

All units are sold with a ¼ wave omnidirectional whip antenna. Other antennas, such as directional Yagi or Patch antennas, are sold separately.
